

Specialist Surveys

Drone. Thermal. Leak Tracing. Time-Lapse.

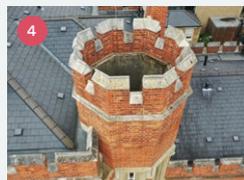

Drone Surveys & Services
 We've specialised in drone surveys and aerial photography solutions to the property and construction sectors since 2013. Our services include; visual drone surveys, full roof & elevation surveys, geo-spatial surveys and marketing imagery.

Thermal Surveys
 Thermal surveys are a great way to understand how your building is performing and help inform decisions to achieve energy saving goals. Our qualified thermographers use high-quality infrared cameras to inspect and locate areas of heat loss or water ingress and report on their findings.

Time-lapse
 Time-lapse is a great way to record & monitor your development or major works project. It also elevates your engagement with your target audience. EK SS bring our expertise to time-lapse ensuring you receive imagery and data of the highest standard using cutting edge technology.

Leak Trace and Detection Surveys
 Leaks can cause damage to a building's finishes and premature deterioration of its fabric, but identifying the cause of leaks can be difficult, that's where our Leak Detection Specialists come in. We carry out detailed Leak Investigations that systematically eliminate possible causes until the source is identified.
